

Monchiero 5050 Pruning and Picking Machine

Picking and Pruning made faster and easier

Fast and Functional

The new 5050 Monchiero Pruning and Picking Machine allows for faster and more accurate production. The operators are easily able to move vertically and horizontally as required, in order to optimise their working position.

Easy Reaching

The operator is able to reach exactly where he needs to work and has complete control of all functions of the machine from the command console on the basket.

Teamwork - Higher and wider

Time and efficiency is gained with machine being able to reach 7m high and 9m wide. The 5050 allows for the connection of 4 x pneumatic scissors directly to the machine with two operators in the baskets and two at ground level.

Technical features

Engine: Yanmar 30 KW with low fuel consumption.

Hydrostatic transmission - 4x2.

Air compressor with 4 tanks. Capacity - 720 Lt.

Two well protected Hydraulic baskets controlled by joystick with pneumatic pruning device.

Automatic levelling of basket.

Air connections on lower frame to allow people pruning at ground level.

Max pruning height - 7m, Max pruning width - 9m.
